

Peak Performance Program Overview

Patient Guide

Functional Health & Longevity Program · KORB Health Group · For Patient Reference

This guide is for educational reference only. It is not medical advice. Your KORB provider determines which pathway and dose are right for you. If you have questions, contact KORB by phone or email (see contact information below).

What Is the Peak Performance Program

Peak Performance is KORB's performance- and body-composition-focused tier within the Functional Health & Longevity Program. It offers two pathways — Pathway A and Pathway B — each pairing a primary growth hormone-releasing agent with the same staggered BPC-157 combination used in Gateway. Your provider determines which pathway, if either, fits your goals; the two pathways are not combined with each other.

These peptides are used in an investigational capacity — most are not FDA-approved for this specific use, and much of the current evidence comes from earlier-stage research rather than large, completed human studies. Your provider will walk you through what this means before you begin.

Choosing Your Pathway

Your provider selects one pathway based on your goals and clinical profile.

Pathway A — CJC-1295 / Ipamorelin

A growth hormone-releasing peptide combination. May support recovery, body composition, and performance goals. Injected most nights (6 on / 1 off). Begins Week 1, active Weeks 1–12 of your cycle.

Pathway B — Tesamorelin

A growth hormone-releasing peptide. Your provider determines your specific dose based on your clinical profile. Injected most nights (6 on / 1 off). Begins Week 1, active Weeks 1–12 of your cycle.

How Your Peak Combination Works

Both pathways follow the same staggered structure as Gateway — your medications don't all start on the same day. Your full Treatment Schedule will show exact dates for your cycle.

BPC-157 — added Week 3

Studied for its potential role in soft tissue recovery and musculoskeletal support. Injected daily. Active Weeks 3–8 of your cycle.

GHK-Cu — optional add-on, begins Week 5

A copper peptide studied mainly for skin and tissue support. Available as an add-on if selected by you and your provider. Injected three times weekly. Active Weeks 5–8 of your cycle.

Staggered by design:

Your provider starts your Pathway A or Pathway B agent at Week 1 only. BPC-157 is added at Week 3. Do not start any medication early or adjust your schedule without speaking to your KORB provider.

Pricing:

For current Peak Performance Program pricing, contact KORB Operations or ask your provider at your visit.

How Your 16-Week Cycle Works

- Baseline visit — labs only. No prescription is sent at your first visit.
- Once your baseline labs are back, KORB Operations schedules your Week 1 visit.
- Week 1 — your provider reviews labs and starts your Pathway A or Pathway B agent.
- Week 3 — BPC-157 is added to your schedule (and GHK-Cu at Week 5, if selected).
- Week 12 — a follow-up lab draw at Quest Diagnostics.
- Week 16 — your renewal visit. Your provider reviews your labs and response, then renews or adjusts your pathway and combination for the next cycle.
- Any weeks after your medications' active windows are an off period for lab review and lifestyle focus.

What to Expect

Response to peptide therapy varies between patients. These are not guaranteed treatments, and results — if any — typically emerge gradually over the course of a cycle, not immediately. Your provider reassesses your pathway and response at every 16-week renewal visit.

Labs & Monitoring

Baseline labs are required before starting your Peak Performance pathway. A follow-up lab draw at Quest Diagnostics is completed around Week 12 of each cycle. If you're using the GHK-Cu add-on, additional copper monitoring applies.

You will receive an email from KORB Operations with instructions on when and where to complete each lab draw at Quest Diagnostics. Please complete labs at least one week before your scheduled visit — some results can take about a week to come back.

Safety Reminders

- Use your Peak Performance medications only as prescribed. Do not change your dose, course length, or schedule without provider direction.
- Do not start BPC-157, GHK-Cu, or any add-on early — your provider controls the staggered timing.
- Do not combine Pathway A and Pathway B, or add medications beyond your prescribed combination, on your own.
- This program is not appropriate during active malignancy or pregnancy.
- Tell your KORB provider about any new medical condition or medication, or if you become pregnant.
- Your prescription label is the authoritative source for your dose and directions.
- Use a new syringe for every injection — do not reuse syringes.
- Follow your state or local regulations for sharps disposal.

When to Contact KORB and When to Seek Emergency Care

Contact KORB — Phone or Email

- Questions about your program, pricing, or scheduling
- Questions about your medication instructions
- Mild side effects or concerns about your response
- General questions about the Peak Performance Program

Email: info@korbhealth.com

Phone: +1 (888) 959-7299

Hours: Monday – Friday, 9 AM – 6 PM (Central Time)

Seek Emergency Care Immediately

- Trouble breathing or throat / face swelling
- Severe rash or widespread hives
- Chest pain or fainting
- Severe or rapidly worsening symptoms
- Confusion or severe weakness
- Any symptom that feels urgent or unsafe

Phone and email are not appropriate for emergencies. When in doubt, go to urgent care or the emergency room.

Key Reminders

- Your provider selects Pathway A (CJC-1295 / Ipamorelin) or Pathway B (Tesamorelin) — the two pathways are not combined.
- Your medications are staggered by design — primary agent at Week 1, BPC-157 at Week 3.
- Baseline visit = labs only. No prescription is sent at your first visit.
- For current program pricing, contact KORB Operations or ask your provider.
